

## SPHERO™ Color Particles

- Excellent for latex agglutination tests
- Enhances the visibility of agglutination
- Available with functional groups for covalent binding of antigens or antibodies.

The SPHERO™ Blue Particles are prepared by polymerizing oil-soluble dye in styrene. They are free of solvent commonly found in particles stained with a solution of dye in organic solvent. These particles are intensely colored to enhance the visual detection in assays such as latex agglutination, dipstick and membrane based assays.

## SPHERO™ Polystyrene Blue Particles

Particle Type and Surface	Size, $\mu\text{m}$	% w/v	Catalog No.	Unit
Blue Polystyrene	0.4-0.6	5.0	PPB-05-10	10 mL
Blue Polystyrene	6.0-8.0	1.0	PPB-60-5	5 mL
Blue Polystyrene	90-105	1.0	PPB-1000-5	5 mL

(1)

Combination of the two methods above to enhance clumping.

(2)

Two forms of simple latex agglutination: (1) The antibody is coated to the particles and reacts with the antigen in the test sample. (2) The antigen is coated to the particles and reacts with the antibody in the test sample.
