

SPHERO™ Ultra Rainbow Quantitative Particle Kit

- Contains 6 intensities of Ultra Rainbow Fluorescent Beads with NIST assigned ERF (Equivalent Number of Reference Fluorophores) values based on a published procedure using NIST SRM 1934 and a calibrated laser-based CCD fluorimeter
- Provides microsphere reference standards for fluorescein isothiocyanate (FITC), phycoerythrin (PE), allophycocyanin (APC) and Pacific Blue (PB) fluorescent channels using four different NIST reference fluorophores; fluorescein, Nile Red, APC and Coumarin 30.
- Used during flow cytometry standardization and calibration measurements for the further advancement of biological and clinical applications.

Particle Type and Surface	Size, μm	Catalog No.	Unit
Ultra Rainbow Quantitative Particle Kit, 6 Intensities, 2E6/mL, (NIST Traceable ERF Flow Cytometry Standard)	3.5-3.9	URQP-38-6K	6x1mL

Designed to determine the accuracy, precision & sensitivity in the Pacific Blue, FITC, PE, & APC channels

Accuracy

- Provides a bead set to accurately measure comparable data from different types of instruments at different locations
- Determines the linearity of the digital output from the analog-to-digital converter

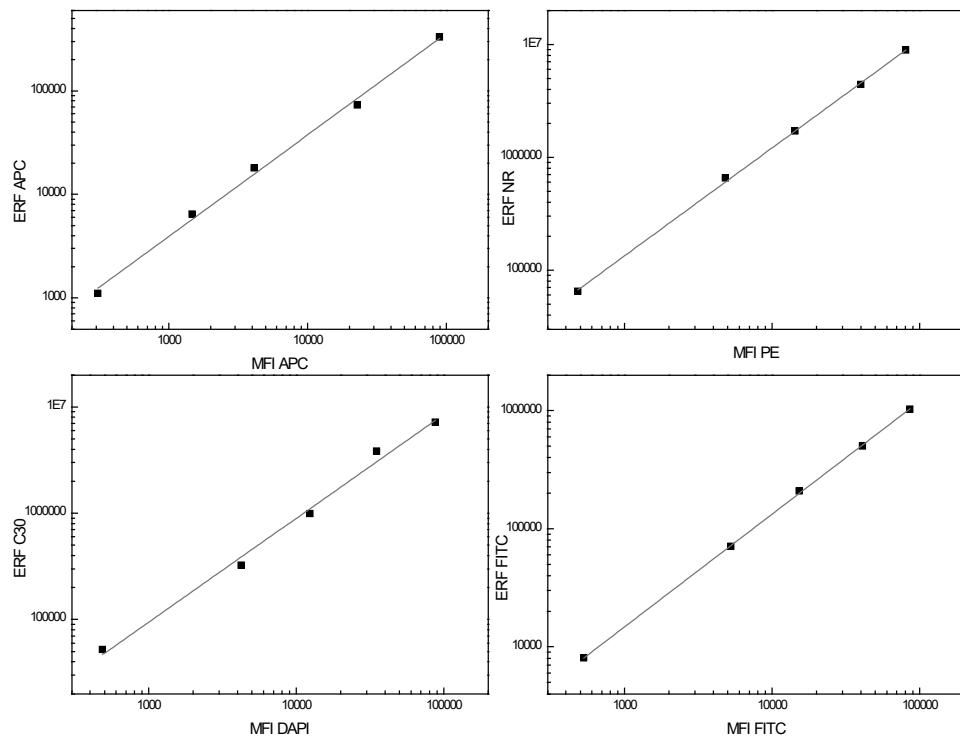

Precision

- Detects laser fluctuations, failed electronics, or obstructions in the flow cell

Sensitivity

- Determines background noise level and instrument efficiency
- Checks instrument's ability to distinguish dim peaks from blank beads
- Detects dye or light contamination
